COMMISSIONERS OF LANDS FISH AND WILDERNESS

REPORT

GENERAL ASSEMBLY

1907

January Session, 1907

PRINTED BY THE

STATE OF ILLINOIS, 1907

COMMISSIONERS OF INLAND FISHERIES.

CHARLES W. WILLARD, Westerly, *President*.

DANIEL B. FEARING, A. M., Newport, *Vice President*.

WILLIAM H. BOARDMAN, Central Falls, *Secretary*.

ADELBERT D. ROBERTS, Woonsocket, *Auditor*.

THEOPHILE GUERIN, Woonsocket, *Treasurer*.

WILLIAM P. MORTON, Providence.

ISAAC H. CLARKE, Jamestown.

DEPUTY COMMISSIONERS.

WILLIAM T. LUTH, Newport, *Chief Deputy*.

JAMES HARRINGTON, Newport.

J. B. ALLEN, New Shoreham.

A. V. WILLIS, New Shoreham.

SUPERINTENDENT OF HATCHERY AND EXPERIMENT STATION.

EARNEST W. BARNES, Wickford.

REPORT.

To the Honorable the General Assembly of the State of Rhode Island and Providence Plantations, at its January Session, 1913:

The Commissioners herewith, present their forty-third annual report, for the year 1912, which contains as required by law, data and statistics with the respect to the fisheries under their jurisdiction and such recommendation as they deem expedient.

Your Commissioners desire at the very commencement of this report to thank the members of the Assembly for their liberal support of this branch of the State's work. The appropriation of 1912 enabled them, in addition to the regular line of work, to do the considerable repair work at the Wickford Hatchery and Experiment Station, which was made necessary by the lack of appropriation for the preceding year, and also to construct a suitable wharf and building—a thing which has been needed at the Station for a number of years and had now become quite imperative.

A suitable site for a black bass hatchery has been sought and two or three locations are now being considered.

Arrangements have been made to commence in the early part of this year, 1913, a survey of the enumerable fresh-water ponds in the State with a view of determining the kind of fish for which they are best adapted and then to endeavor to keep them well stocked.

In addition to the above, the work of the Commission has followed the usual lines and may be briefly mentioned as follows:

The enforcement of the laws respecting fresh-water fishes.

The purchase of egg bearing lobsters as required by Chapter 595 of the Public Laws of 1909.

Employment of deputies to enforce the lobster laws.

The rearing of lobsters to the bottom-seeking stage—525,000 lobsterlings, in round numbers, were thus reared in 1912.

The gathering of data and statistics with respect to the food fishes.

The coöperation with fisheries authorities of neighboring states and abroad.

The distribution of literature and information to the public for the development and encouragement of the fisheries.

Occasion is here taken to thank the New York, New Haven & Hartford Railroad Company for its courtesy in granting free transportation of fry and messengers.

The financial statement for the year 1912 is as follows:

State of Rhode Island in account with the Commissioners of Inland Fisheries.

DEBIT.

1912.

May 5.	To expenses of the Commissioners in maintaining the various departments of their work from March 15 to December 31, 1911*.....	\$9,039 02
Dec. 31.	To expenses of the Commissioners from January 1 to December 31, 1912.....	1,665 50
	To expenses and services of deputies under the law from January 1 to December 31, 1912..	3,790 40
	To expenses at the Wickford hatchery and Experiment Station, January 1 to December 31, 1912.....	8,693 12
		<hr/>
		\$23,188 04

*It was during this period that the Commission was without funds but was able to carry on a somewhat restricted amount of its work because of personal financial support by certain of its members.

CREDIT.

1912.

Dec. 31. By received from the State Treasurer \$23,188 04

Amount received for 273 lobster licenses, at \$5.00 each,
as per receipts from the State Treasurer . . . \$1,365 00

Respectfully submitted,

CHAS. W. WILLARD,
DANIEL B. FEARING,
WILLIAM H. BOARDMAN,
ADELBERT ROBERTS,
THEOPHILE GUERIN,
WM. P. MORTON,
ISAAC H. CLARKE.

STOCKING FRESH-WATER PONDS AND STREAMS.

Owing to the protracted drought in the summer of 1912, the streams and ponds throughout the State were very low and for this reason your Commission did not deem it advisable to expend much money in distributing trout and other fresh-water fishes. But late in the fall after the commencement of liberal rains a number of trout were secured and carefully distributed during the open winter.

The Commissioners take great pleasure in noting a revival of interest in the fresh-water fishes on the part of citizens of the State, as evidenced by the large number of communications which were received through the year. This revival is not confined to this State, but is wide-spread throughout the country. In Kansas, the State has, at great expense, constructed a mammoth hatchery capable of furnishing a great quantity of young fishes. Nearer home, Massachusetts is erecting large black bass and trout hatcheries.

In response to this demand your Commission has decided to give greater prominence to the fresh-water stocking. The ponds and streams of the State which are capable of supporting fish life are numerous and varied. In order, therefore, that the fewest mistakes may be made and the greatest good accomplished in stocking these fresh-water areas, a systematic investigation of the ponds and streams of the State has been started. A determination will be made of the kinds of fish contained and the possibility of further stocking them with both food and game fishes.

In connection with this work, the establishment of a hatchery for the rearing of black bass and a probable extension to the rearing of other fresh-water fishes, has been undertaken.

With the inauguration of these methods your Commission hopes to be able to accomplish more in the development of the fresh-water resources of the State. In the past, the efforts of the Commission has proven very successful in a great many cases. Especially noteworthy is the effort to stock the Pawcatuck and its tributaries with large-mouth black bass. One day in last July (1912), a black bass

weighing ten pounds was taken from the Pawcatuck, and the same day another weighing six pounds was also caught. Later on, in September, two, weighing four pounds each, were taken from the same stream near Westerly by Mrs. Robinson. Fish of this size must be at least eight years old.

THE COLLECTION OF DATA AND STATISTICS RELATING TO THE COMMERCIAL FISHERIES.

The gathering of data and statistics relating to the fisheries is one of the most important duties which the General Assembly has assigned to the Commission, furnishing as it does, a basis for the enactment of intelligent fish laws. In order that it may be of the most value, it is quite necessary that the facts and data gathered should cover as great a number of years as possible, and it is obvious that they should be continuous. Every effort has been made to make them reliable, but as mentioned in previous reports, the absence on our statute books of laws making returns compulsory has prevented the data from being complete.

GENERAL CONDITIONS OF THE FISHERIES IN 1912.

In general, the fishing in Narragansett Bay in 1912 was extremely poor. Marketable fish were scarce, and few of the "stub-trap" fishermen made more than enough to clear expenses. Indeed, as one experienced fisherman who had kept close observation on this branch of the fisheries, remarked, fewer single fish were caught this year than formerly barrels of fish had been. The last of May and first part of June there were some good catches of large squiteague, and ordinarily, this would have been considered an omen of a good season, but these fish left and no good catches were made afterwards. Small scup and small butterfish were rather plentiful, and in the absence of sizeable fish, were marketed. Bait fish were quite common. While it is difficult to attribute the poor season to any single cause, it is a note-

worthy fact supported by considerable evidence that beginning in the upper part of the Bay with the gradual extension of the oyster beds, the fishing has correspondingly diminished.

Hand-lining within the Bay was also poor. Off Newport the hand-liners were handicapped by unusually stormy weather, but when the weather permitted, the catches were good. Off-shore trappers reported that the fishing was below the average except for scup, which were more abundant than for a number of years.

The following tables of the shipment of sea products from Newport are submitted as heretofore, and while they show a gain in the amount of fish shipped, this is due almost entirely to the large run of scup.

THE LOBSTER INDUSTRY.

The total number of pounds of lobsters reported caught in Rhode Island waters was over 140,000 less than in 1911. On the other hand, since the number of pots set had decreased about one-fourth, the average number of pounds per lobster pot increased from 38 to 43. Within the Bay, lobster fishing has shown the same gradual decrease as other branches of fishing, and seems to be due to the increase in the oyster industry.

Small lobsters were reported by the fishermen to have been more abundant, especially in those parts stocked by the Wickford hatchery. Here fish-traps and beam trawls, although with quite large meshed nets, sometimes caught as high as a waterpail full at one haul of the net.

Off Newport and around Point Judith and Block Island the catch of lobsters was reported better than usual, especially from the middle of June to the middle of July. During this period, one firm in two hauls, caught sufficient to net them an ordinary full season's profit.

The following tables have been compiled from data furnished for the greater part by William T. Luth, Chief Deputy Lobster Commissioner, and at the conclusion of these a list of the licensed lobster men is given as prescribed by law:

TABLE III.

Table Comparing the Number of Pounds of Lobsters, Number of Pots, and Average Number of Pounds Per Pot, for the Years 1904-1912.

YEAR.	Total Catch in Pounds.	Newport.	Number of Pots.	Average Number of Pounds Per Pot.

FISH-TRAPS, SET IN RHODE ISLAND WATERS.

A table giving the number and distribution of the fish-traps in Rhode Island waters for the past fourteen years is given below.

In this table the following arbitrary divisions have been made for the sake of convenience: ,

I. *Providence River*.—South to a line joining Warwick Point and Popasquash Point.

II. *Greenwich Bay*.—The West Passage south of Providence River division and north of a line drawn east and west, touching the southern part of Hope Island.

III. *West Passage*.—The West Passage south of the Greenwich Bay division, north of a line drawn due west from Beaver Tail and west of a line connecting the south point of Prudence Island and North Point, Conanicut Island.

IV. *Mount Hope Bay*.—North of Railroad Bridge, Tiverton, and a line connecting Bristol Ferry and Mussel Shoal Light.

V. *East Passage*.—South of Providence and Mount Hope Bay divisions and north of a line from Beaver Tail to Brenton's Point.

VI. *Sakonnet River*.—The Sakonnet River south of Railroad Bridge to a line connecting Flint Point and the Breakwater, Sakonnet Point.

VII. *Off Shore*.—Traps south of above divisions and east of Point Judith, not including those off Block Island.

VIII. *Block Island*.—Traps set off this island.

IX. *Watch Hill*.—Traps set along the mainland of Rhode Island, west of Point Judith.

TABLE VI.

Table Showing Number and General Distribution of Fish-Traps Since 1898.

	Providence River.	Greenwich Bay.	West Passage.	Mount Hope Bay.	Sakonnet River.	East Passage.	Off Shore.	Block Island.	Watch Hill.	Total.

DEEP WATER FISHING OFF NEWPORT, 1912.

With the exception of scup, which were very abundant, the "run" of fish off Newport in the early summer of 1912 was considerably below the average. Even the "trash-fish"—*i. e.*, fish not marketable except as bait—were few. The majority of the big scup traps, in which the greater part of the fish named below were caught, were set about April 25th.

Scup.—Seven average sized fish from Point Judith on April 24, constituted the first reported catch of scup in Rhode Island waters in 1912. As will be seen from the accompanying table this is two days earlier than last year, but was an average date. One lone fish taken April 25 from the West Passage of Narragansett Bay, and one April 27 from Coddington Cove, made up the early catches of stragglers. May 1st the largest catch had increased to 6 barrels. About this time a severe storm raised havoc with the traps, and when it had calmed down sufficient to haul the traps about May 24, the run of scup had begun. May 15, the shipments were limited to prevent glutting the market. June 7, the run began to slacken and ended about June 10. Some very large fish were caught. One was reported to have weighed 17 pounds and measured 22½ inches.

Mackerel.—The mackerel arrived on the Atlantic Coast in the latter part of April, and as usual, were first located off Chincoteague, Virginia. May 1, the fishing base had worked north to Atlantic City. The first catch in Rhode Island waters consisted of four large ones caught off Newport, May 3. A little over a fortnight later (May 22), the first large shipment from Newport was made. From this on the catches were variable, but wide spread. The best day was June 12.

Tinker Mackerel. The "tinker" mackerel first appeared about June 10.

The first barrel of *butterfish* was taken by John Suza on May 21st.

The earliest catch of *squiteague* was May 13, at Coddington Cove. June 7, the first barrellful was taken and by the middle of June, as high as 8 barrels were taken in a single haul. Only occasional catches were made from this on.

The first catch of *striped bass*, two specimens, was made at Point Judith, April 24. The first barrel lot, off Price's Neck, May 1. On May 9, a tubfull was caught as far up the Bay as Coddington Cove, and on May 8, one weighing $5\frac{1}{2}$ pounds was taken near Bishop's Rock in an eel trap.

April 14, the first *sea robin* was caught in deep water traps off Point Judith. The first one in the Bay was taken April 25.

The very remarkable number of *squid* was a feature of the season's fishing in 1912, as was evidenced by a single haul of 250 barrels from one trap on May 9. May 10 to May 15, many traps were cut to get rid of them, as it was impossible to haul the nets on account of the weight. May 21, they began to leave, but big hauls of them were made later in certain places. June 5, they were running strong in the inshore traps.

The first *bluefish* of the season was caught off 2nd Beach, Newport, on June 15.

The first catch of *swordfish* in this vicinity was made off No Mans Land about June 16.

One large *sturgeon* weighing about 260 pounds was caught on June 20.

The first appearance of various marketable fish for the past eight years is shown in Table XI.

ENFORCEMENT OF STATE LAWS.

As heretofore, four deputies were employed to enforce the lobster laws. Two for the entire year, and two additional ones during the open season.

In the enforcement of the laws concerning the fresh-water fisheries, your Commission has employed a number of deputies whose personal interest in the fisheries is strong enough for them to serve without compensation.

The following prosecutions were made and fines imposed and paid under the lobster law (the names of those fined are omitted):*

Newport, May 3, 8 short lobsters	\$40 00
Point Judith, May 27, fishing without license	20 00
Point Judith, May 27, fishing without license	20 00
Newport, June 10, fishing without license	20 00
Newport, September 14, fishing without license	20 00
Newport, September 14, fishing without license	20 00
	<hr/>
	\$140 00

BIOLOGICAL RECORDS.

Physicial and biological records of various kinds have been continued at the Wickford Hatchery and Experiment Station, and will be published in the near future.

AN EXHIBIT OF SEA FARMING.

Under the above heading your Commission has, for a number of years, prepared an exhibit of marine and fresh-water fishes at the Washington County Fair. In view of the large crowds which annually view this exhibit, it was continued last year. The expenses of

*In addition to these cases before the courts four licenses were revoked by the Board.

operating this exhibit is borne almost entirely by the Agricultural Society, and inasmuch as it furnishes a means of interesting a large number of people in the fisheries of the State your Commission has readily assented to continue it.

CO-OPERATION WITH FISHERIES AUTHORITIES.

As heretofore in accord with the duties as prescribed by the General Assembly, your Commission has been in close touch with the fisheries boards of various states and abroad. The work of the Commission has continued to attract considerable attention as evidenced by the frequent requests referred to this Commission by the United States Bureau of Fisheries.

In July, Capt. W. B. Clementson, Fishery Officer of the North Eastern Sea Fisheries Committee of England, was sent over from England to study the methods used in this country to propagate lobsters. In his official report he expressed the conclusions he had reached as follows: "After carefully reviewing and considering the different means of hatching as used in the various States, I think the Rhode Island method as in vogue at Wickford, is the best and can be successfully carried out in this country."

Requests for data and descriptions of our methods of lobster propagation have been received from officials in Austria, Canada and Spain.

THE PROPAGATION OF LOBSTERS AT THE WICKFORD EXPERIMENT STATION.

The lobster rearing at Wickford in 1912 was the most successful the station has ever had, not only from the point of the number of lobsters reared to the bottom stages, but also from the number per egg lobster and percentage returns from the fry. The season opened May 24 and closed in the early part of August. The number of lobsters reared to the bottom stages was 521,861. The young lob-

sters were liberated at the following places: East Shore Conanicut Island, West Shore Conanicut Island, Mill Cove (Wickford) Poplar Point, Gould Island, Hope Island, Fox Island, Sakonnet River, Prudence Island and Block Island.

TABLE XII.

Total Number of Fourth and Fifth Stage Lobsters Reared Each Year Since 1900.
